End-to-End Release Portfolio: GreenLeaf Grocers

GreenLeaf Checkout Overhaul — Capstone Module 2

QA evidence covering planning, test design, defect reporting, UI automation, backend validation, and release readiness.

Portfolio Status

7/7 evidence items embedded

All required portfolio evidence is now included: planning, test design, both critical defects, Playwright automation, SQL backend validation, and Jira/PR traceability.

1. Test Strategy — Jira Board

GreenLeaf Jira Board — Checkout Overhaul

Local Phase 1 handoff page for portfolio screenshot capture.

Type	Key	Summary	Priority
Epic	GL-E01	GreenLeaf Checkout Overhaul	High
Story	GL-101	Guest Checkout Without Account	High
Story	GL-102	Apply Promo Code at Checkout	Medium
Story	GL-103	Checkout Form Validation	Medium

Epic GL-E01 and stories GL-101, GL-102, and GL-103.

2. Test Design — Zephyr Test Case

Zephyr Test Case GL-T1

GL-101

Guest happy path completes checkout

Priority: High

Steps

1. Add a catalog item to the cart.
2. Proceed to checkout and enter name, email, and shipping address.
3. Submit the order without applying a promo code.
4. Verify the success page shows an order ID.

Expected: Order confirmation page displays a valid order ID and total.

GL-T1 Guest Checkout happy-path test case linked to GL-101.

3. Defect Report — Mobile UI (GL-B01)

Local QA Workspace

Defect report — local Jira-style bug ticket

Bug **Apply Promo button overlaps Submit Order on mobile checkout**

Severity	High
Priority	High
Evidence	UI defect reproduced in Chrome at 390 x 844 viewport.
Browser	Google Chrome
Viewport	390 x 844
OS	Linux (lab VM)
URL	http://localhost:3000/checkout

PRECONDITIONS

GreenLeaf Grocers is running, at least one product is added to the cart, and the user is on the checkout page.

STEPS TO REPRODUCE

1. Add a product to the cart. 2. Navigate to checkout. 3. Enable the device toolbar. 4. Set the viewport to 390 x 844. 5. Scroll to the promo code and order summary section.

EXPECTED RESULT

Apply Promo and Submit Order remain separate, visible, and fully usable below 768px width.

ACTUAL RESULT

Apply Promo overlaps Submit Order below 768px and blocks normal interaction with the submit control.

Critical mobile overlap: Apply Promo covers Submit Order below 768px width.

4. Defect Report — Promo API (GL-B02)

Local QA Workspace

Defect report — local Jira-style bug ticket

Bug **Expired promo code returns HTTP 500 instead of a validation error**

Severity	High
Priority	High
Evidence	evidence/api_response.json
Method	POST
URL	http://localhost:3000/api/promo/validate
Request	{"code":"EXPIRED20"}

PRECONDITIONS

GreenLeaf Grocers is running on localhost:3000 and the promo validation API is available.

STEPS TO REPRODUCE

Run the API probe or send POST /api/promo/validate with EXPIRED20, then inspect the HTTP status and response.

EXPECTED RESULT

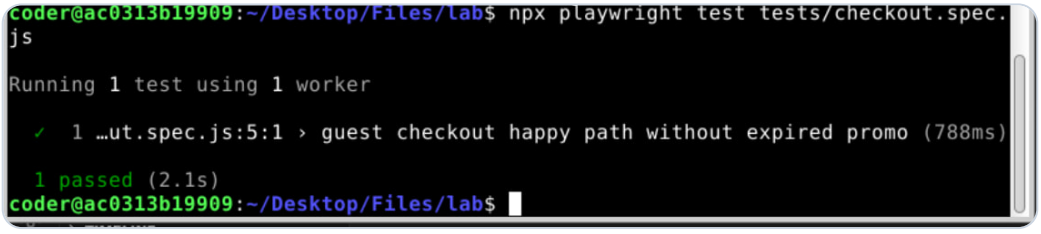

A controlled 4xx response, such as HTTP 400, with a clear invalid or expired promo-code message.

ACTUAL RESULT

HTTP 500 Internal Server Error with a generic internal error response.

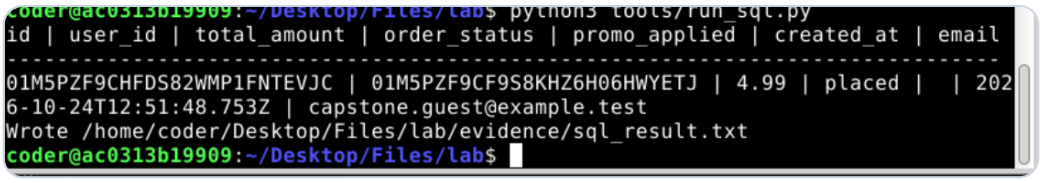

POST /api/promo/validate with EXPIRED20 returns HTTP 500 instead of a controlled invalid-code response.

5. Automation — Playwright Happy Path

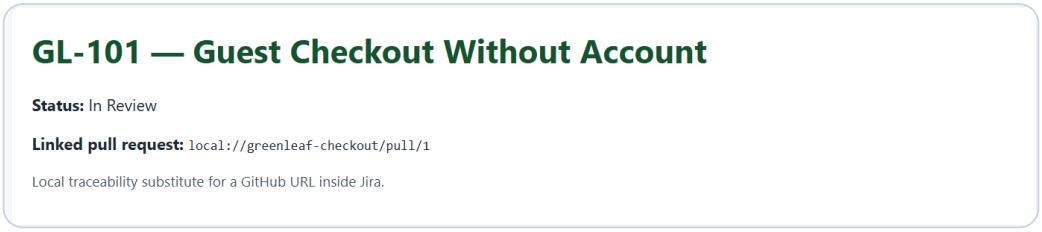

Guest checkout happy-path automation completed successfully: 1 passed.

6. Backend Validation — SQL SELECT

SQL validation returned the newest persisted order for capstone.guest@example.test and wrote evidence/sql_result.txt.

7. Version Control — Jira / PR Traceability

GL-101 Guest Checkout Without Account is In Review and linked to local://greenleaf-checkout/pull/1.

Test Summary Report

Executive Summary

The GreenLeaf Checkout Overhaul was evaluated through test planning, defect discovery, Playwright happy-path automation, backend validation, and version-control traceability.

Critical Defects

GL-B01: On mobile viewport widths below 768px, Apply Promo overlaps Submit Order and can block checkout.

GL-B02: `POST /api/promo/validate` with `EXPIRED20` returns HTTP 500 instead of a controlled invalid/expired-code response.

Automation Status

The Playwright guest checkout happy-path test passed without applying the expired promo code.

Backend Validation

SQL validation confirmed that the Playwright order for `capstone.guest@example.test` was persisted in SQLite.

Release Recommendation

NO-GO

Do not release the checkout overhaul until both critical defects GL-B01 and GL-B02 are fixed and successfully retested.
